

When requested, we can supply our seats with a protective system.

Product: Maxwax is a unique blend of food grade waxes taken up in a mild, non-aromatic solvent. The formulation is specifically designed to penetrate porous surfaces (such as wood), whilst leaving a thin wax film on the surface at the same time. This not only nourishes the wood like an oil, but also leaves a wax lustre to the surface which can be buffed up to a healthy sheen.

Properties:

- ✓ Being a liquid, Maxwax is very easy to apply and enhances the natural colour of the timber.
- ✓ Maxwax will help repel water but not seal completely allowing the timber to 'breathe'.
- ✓ Contains a unique wax hardener that provides an outstanding surface finish that is antistatic and repels dust.

Warning: As with all timber finishes, Maxwax will need to be reapplied on a periodic basis to maintain the integrity of the timber.

Contact Information

For more information or to order the product for reapplication, please contact the manufacturer:
