

When requested, we can supply our seats with a graffiti protection system. The product we use is CW21

Product: CW21 is a scientifically developed non toxic, water based product. After being applied, it dries with a clear-semi-Matt finish. It is a clear composite semi-sacrificial coating system made up of cross-linked acrylic polymers and emulsion type materials made from food grade components used for protecting surfaces from all types of graffiti attack. It is non-toxic and non-hazardous.

What is mean by a sacrificial coating system?

A coating system that once applied forms a film over any substrate and then upon any graffiti attack or pollution buildup, it is removed with the graffiti or pollution. CW-21 is easily removed by one of two methods; steam at 130°C Bio Powerclean or one of our Bio Paint and Graffiti removers. **For further protection, the coating must be reapplied.**

CW-21 can be applied to substrates such as:

Concrete, Granite, Bricks, Tiles, Natural Stone, Marble, Unpainted Timber, All Painted Surfaces.
